

Tuesday 31st August 2010

To: DNA Security Solutions

We decided to install the DNA Guardian System in mid 2010 in view of the spate of robberies that were occurring at hotel gaming rooms in close proximity to our property. In fact these robberies are continuing in this state at regular intervals since our date of our installation.

One of the main reasons for us to take this action was for the comfort and security of our staff in the gaming room, which is situated separately from the busy bar and restaurant areas that are on another level. We believed that the system would be a deterrent for criminals who would then look for softer targets.

The staff have told us that they appreciate our efforts in avoiding risks by the installation of the DNA Guardian which should compliment the other security support that the hotel previously and continue to provide. They feel reasonably secure at our hotel and have expressed their willingness to activate the spray when and if required.

We obviously would prefer not to see a robbery incident here but we are pleased that in the event of a robbery we have an opportunity to identify and prosecute the perpetrators.

Clearly our action of investing in this system should reflect our willingness to recommend it to other business owners who are at risk of robberies at their premises.

Yours faithfully

Bob Karpluk
Managing Director
